

Learn the finance behind a working quant lab

One inspectable project connects products, models, controls, and validation.

Python + QuantLib → SOFR curves + swaps → Bermudan swaptions
Equity cliquet → QuantLib three-factor gap → Callable XCCY + independent validation

Tim: decisions ■ **QuantLib:** open source ■ **Codex:** code + tests ■ **Claude:** validation

Choose the expertise you want to build

Mastering Interest Rate Derivatives

Connect curves, swaps, caps/floors, swaptions, calibration, and risk to real desk workflows.

[Explore IRD on Udemy](#)

Mastering MBS and ABS

Connect securitization, prepayments, waterfalls, convexity, and OAS to structured-product decisions.
