Agenda

1 Purpose

2 Worked Example

1 Purpose

2 Worked Example

- Lead with the decision or result.
- Keep assumptions visible and testable.
- Use equations only when they improve understanding.

Design rule

A reader should understand the slide's point in a few seconds.

1 Purpose

2 Worked Example

Worked Example

From market inputs to a decision-ready result

A deterministic cash flow C_i paid at time t_i has present value

$$PV = \sum_{i=1}^n C_i P(0, t_i).$$

- $P(0, t_i)$ comes from the calibrated discount curve.
- Every input has an as-of time and an explicit unit.
- Validation reprices the instruments used to build the curve.

Scenario	NPV	Change
Base market	\$1.24mm	–
Rates +1 bp	\$1.18mm	–\$0.06mm
Volatility +1 vol pt	\$1.31mm	+\$0.07mm

Takeaway

Pair every number with a scenario, unit, and interpretation.

Thank You
